DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dartt in view of Crimmel.

There is disclosed in Dartt a rack, comprising: a single formed wire having a base and a plurality of holding wire slots spaced from the base, and a raised central wire slot (uppermost slot).

Crimmel discloses a wire rack having a base and a wire cross-member 11 welded to the base for support.

It would have been obvious to one skilled in the art to provide the rack of Dartt with the welded wire cross-member taught in Crimmel, in order to help strengthen the rack.

In regards to the use of the rack for cooking poultry and meats, such is an intended use and provides no structural limitations to the claims.

In regards to the functional recitation of positioning the rack on its side, it is clear that the rack of Dartt could be placed on its side.

In regards to the positioning of the wire slots to support a can therebetween, it is apparent that if one desired such a function could be performed by the Dartt reference.

The structural limitations of the claims have been met by the prior art references.

Allowable Subject Matter

Claims 6, 7 and 10-12 are allowed.

Claims 3, 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Reed and Ahrens are cited for their disclosure of the state of the art.
